PERSONAL PORTFOLIO WEBSITE

Mini Project Report

A responsive website that introduces a student or professional, highlights skills and projects, and provides contact information.

Abstract

The Personal Portfolio Website is a simple front-end web project built with HTML, CSS, and JavaScript. It presents a person's profile, education, technical skills, project work, and contact details in a clear and attractive layout. The responsive design allows the site to work across desktop and mobile screens.

Objectives

- Create a professional online profile.
- Display education, skills, and completed projects.
- Provide clear navigation between sections.
- Make the website usable on mobile and desktop devices.
- Practice semantic HTML, CSS styling, and basic JavaScript.

Technologies Used

Structure: HTML5
Design: CSS3
Interactivity: JavaScript
Editor: Visual Studio Code
Testing: Modern web browser

Main Sections

- Home: name, role, and short introduction.
- About: background and career interests.
- Skills: programming languages and tools.
- Projects: summaries and links to project work.
- Contact: email or social profile links.

Implementation Workflow

First, create the HTML structure for each section. Add CSS for typography, colors, spacing, layout, and responsive behavior. Use JavaScript only where useful, such as a mobile navigation toggle or smooth scrolling. Replace sample text with personal information and test links and layout on multiple screen sizes.

Expected Outcome

A responsive, easy-to-navigate personal website that can be shared with recruiters, teachers, or collaborators. Future improvements may include a downloadable résumé, project filters, a contact form connected to a backend, and accessibility enhancements.

Testing Checklist

- Check that all navigation links work.
- Confirm the layout adapts to mobile and desktop widths.
- Verify that project and contact links are correct.
- Check text contrast, image descriptions, and keyboard navigation.
- Fix broken links and browser console errors.

Conclusion

The Personal Portfolio Website is a beginner-friendly project that demonstrates core web development skills and provides a practical place to showcase academic and personal work.

Note: This is a sample report. Add your own screenshots, source code, design choices, and implementation details before submitting it.
